165C	Defect	1796	L	Andreas K6OTT	Ics309mm	Incident name and Activation Number run into the Op period Field

SCCo Installer 165C
PackItForms Changes 4.0.12

PackItForms 4.0 Release Notes

PackItForms 4.0 introduces these changes:

- **PDF Rendering:** When viewing an existing message, or after submitting a new or edited message to Outpost, the message is now rendered in PDF format and displayed as a PDF. This ensures exact compatibility with the paper forms, as well as proper pagination and footers.
- **Automatic Form Updates:** Once each day, PackItForms will check with the county ARES/RACES website to see if any forms have changed. If so, it will automatically download and install them. System administrator privileges are not required for these forms updates. Manual installs will still be needed when there are changes to the PackItForms software.
- **New Hospital Forms:** All of the medical forms have been rewritten: Allied Health Status, Hospital Bed Availability (HAvBed), and Hospital Status (formerly Medical Facility Status). Also, they are now included in the standard distribution. There is no longer a separate installer for the Hospital Net. All operators now get all county forms, including the hospital forms.
- **New ICS-213 Form:** The ICS-213 form has been rewritten to match all of the other forms in styling and behavior.
- **Updates to Veoci Forms:** Minor changes have been made to the Veoci forms that were rolled out in August. In particular:
 - Field numbers have been added to most fields, and to the individual items in some checkbox and radio button fields. This will make make voice transmission of the forms more efficient.
 - The blue "-- choose one --" label has been removed from the Jurisdiction drop-down fields on the PDFs, so that blank messages can be printed without that label.
- **Requires Current Platform:** PackItForms 4.0 is not tested or supported on Windows versions prior to Windows 10; on 32-bit processors; or with non-current browsers or PDF readers.

Under the covers, PackItForms 4.0 has been completely rewritten. It is now written in Go and built on the same Go packet library as the weekly packet practice server and the packet shell. As a result, it is much smaller than its predecessor (22MB vs. 207MB) and faster as well.

Source code and maintenance documentation for PackItForms 4.0 is at github.com/rothskeller/packet, and is freely licensed (BSD). The forms and their definitions are at github.com/scc-ares-races/forms and are copyrighted by SCCo ARES/RACES.

If you encounter any problems with PackItForms 4.0, please report them on the packet@scc-ares-races.groups.io mailing list. Please include the appropriate dated log file from C:\PackItForms\Log.
